

TALL FESCUE

Payload

Hit The Jackpot With Payload

Payload is a medium maturity tall fescue, reaching head emergence approximately 2 days later than KY-31 that will maximize season long production. Its strong vigor, large crown size and aggressive regrowth have consistently produced more forage yield. As a forage yield leader, Payload is well adapted for hay production, while its palatability lends itself well to pasture.

In-field performance has shown an excellent disease package with superior resistance to stem rust. Growth habit is a wide flag leaf, moderate height and dark green color. Payload is selected for strong vigor and crown size.

Forage Yield

ENTRY	NORTH		PNW		TOTAL	
	L/Y	% MEAN	L/Y	% MEAN	L/Y	% MEAN

Performance Comparison

¹ KY31- is the variety KY31 from which the toxic endophyte has been removed. KY31+ contains the toxic endophyte. The other fescue varieties in this test do not contain an endophyte.
