# Forages

Foothold's oversized and deep-set crown

Foothold is a long-lived alfalfa bred for its oversized and deep-set crown, making it more tolerant of wheel, hoof and field traffic. Its spreading and prostrate growth habit is conducive to filling-in unseeded acres or bare ground. Selected for a high leaf-to-stem ratio, it has shown a high level of multi-foliolate expression delivering quality forage and more milk per acre. Scoring 30/30 on the Disease Resistance Index compliments Foothold's strong persistence and winter hardiness for longer productivity.

Foothold is selected for dense crowns, high leaf to stem ratio, vigorous roots, high forage dry matter yield and more milk per acre. Forage quality was evaluated using NIRS (Near Infrared Reflectance Spectroscopy) ensuring high NDF digestibility.
