

SEED GUIDE

TWCA QUALIFIED

BrettYoung™
TOGETHER WE TURF

CHANGE NOTHING. CHANGE EVERYTHING.

Same morning coffee. Same meeting. Same team. Same inputs.

What if we told you: you could change nothing, but change everything?

That's what our Turfgrass Water Conservation Alliance seed offers.

It's just as easy to grow as conventional seed, but its drought tolerance is unmatched. TWCA-qualified seed is third-party proven to require 30 per cent less water, meaning even water-starved grass maintains its green covering.

Reduce your reliance on irrigating and leave the watering to the sky. TWCA-qualified seed saves you time and labour, and BrettYoung is your only Class A Canadian partner offering this leading product.

When you're not only concerned with your field, but the future of your business, your community and the planet, the sustainable choice is the only choice you need to make.

Contact your local BrettYoung rep to change everything today.

BrettYoung™
TOGETHER WE TURF

TWCA-QUALIFIED SEED

The best turf starts with the best seed.

Our premium TWCA-qualified seed is proven to thrive even in water-starved conditions.

Start your journey in water conservation with one of these premium varieties today.

KENTUCKY BLUEGRASS (KBG)

TIREM

Tirem has deep roots and exceptional performance in drought conditions, and it maintains its winter colour remarkably well. This variety also displays high tolerance to salt and heat pressure and good overall disease resistance, specifically to dollar spot, rust, summer patch and red thread.

- Can handle low mowing (up to ½ inch)
- Germinates and establishes rapidly
- Drought, heat and salt tolerant
- Good spring green-up
- Resistant to diseases such as dollar spot, rust, summer patch and red thread

WATERWORKS

WaterWorks is a revolutionary development in Kentucky Bluegrass, resistant to both traffic stress and dollar spot disease, while also offering the drought-tolerance to meet TWCA's stringent guidelines. Its superior genetic colour is particularly useful for maintaining green covering in regions with watering restrictions.

- Superior performance in turfgrass quality
- Excellent traffic tolerance
- Dark green genetic colour
- State-of-the-art texture and uniformity
- Benchmark-raising germination rates and purity

KENTUCKY BLUEGRASS (KBG)

FULL MOON

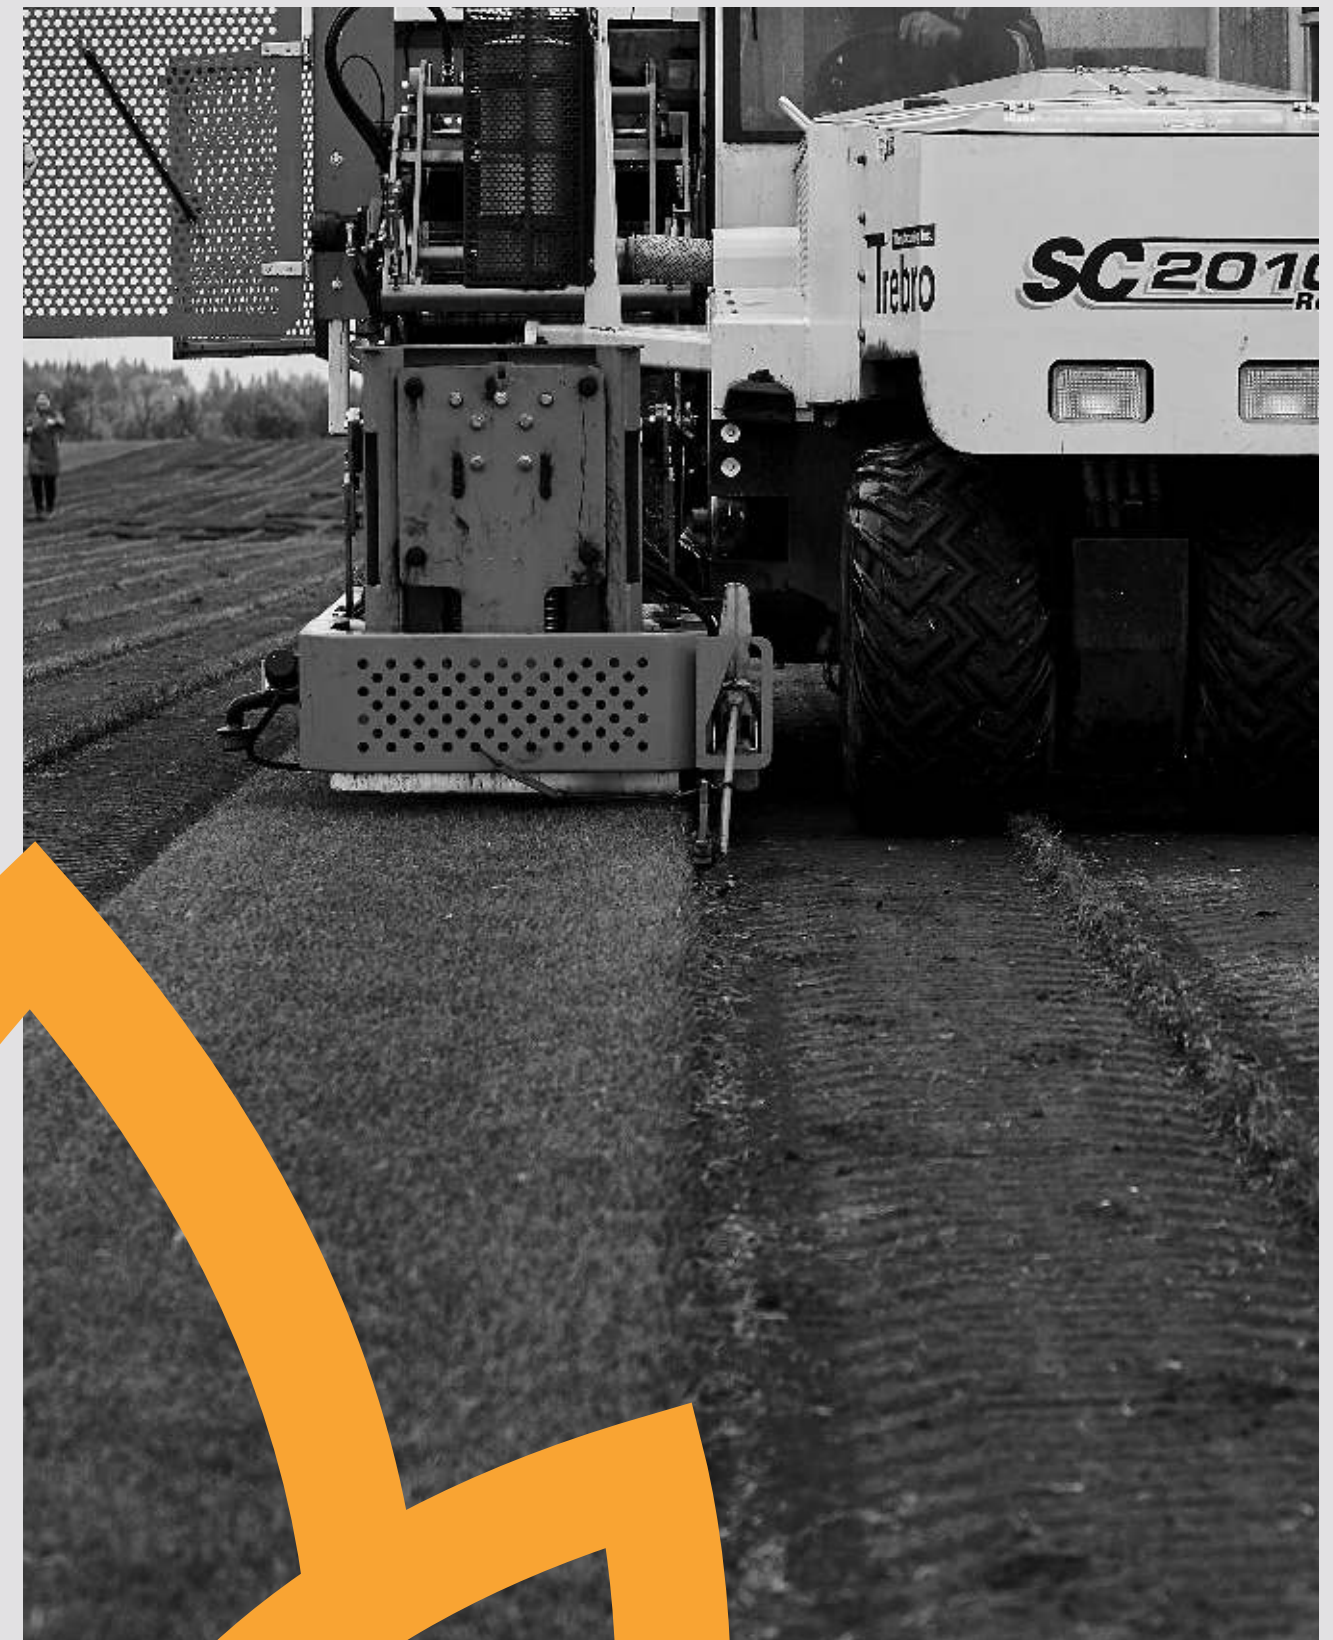

A hybrid, Full Moon exhibits a rich, dark green colour, with a medium-fine leaf texture. The variety has excellent heat and drought tolerance, making it a good blending component with other bluegrasses and tall fescue.

- Good winter colour
- Excellent stem rust resistance
- Useful in blends with dark blue-coloured bluegrasses and perennial ryegrass
- Good summer performance and high seed yield potential

BEDAZZLED

Bedazzled Kentucky Bluegrass has broad applications as a mono-stand and a blending variety. Bedazzled is classified as a “compact-America” type, which means it can be mowed as close as ½ inch and it has high disease resistance, including an R-rating for powdery mildew, brown patch and typhula blight. It also has slower growing habits for reduced mowing.

- Top performer among Kentucky Bluegrasses in turf quality
- Dark genetic colour, desirable texture
- Low and slow growth pattern great for golf, sports or sod field
- Spring green-up
- Traffic wear tolerance

PERENNIAL RYEGRASS (PRG)

RAINWATER

As its name suggests, Rainwater grows perfectly through organic maintenance. A remarkable turf-type perennial ryegrass, Rainwater is tough enough to handle high traffic and to resist dollar spot. Well-suited for both new sod and overseeding, Rainwater has a demonstrated ability to serve a wide range of customers' needs – from the sports turf manager and golf course superintendent to the professional landscaper and homeowner.

- Top-rated for traffic wear resistance and turfgrass quality
- Water savings
- Dollar spot resistance

FESCUE

HEATHLAND (CHEWINGS)

The latest generation of fine fescues, Heathland Chewings Fescue achieves new performance heights in its quality, its drought tolerance and its low maintenance requirements. Heathland has the characteristics of Chewings Fescue, with fine leaf texture, high shade tolerance and allelopathic qualities that resist weed overgrowth. It also requires less frequent mowing than ryegrass, tall fescue or Kentucky bluegrass, and it performs well in low-fertility areas.

- Excellent drought tolerance
- Performs very well in low-fertility areas
- Disease resistance and allelopathic qualities that reduce weed infestation

SHADOW III (CHEWINGS)

As its name suggests, Shadow III Chewings Fescue grows well in shade, in addition to showing strong tolerance to drought conditions, fast recovery from summer stress, and the ability to withstand low mowing regimes. Shadow III has a bright, medium vibrant green colour with increased turf quality, disease resistance and high levels of endophyte. It's an ideal choice as a standalone or in a blend with other cool-season grasses such as perennial ryegrass and Kentucky bluegrass, or with tall fescue.

- Shade and drought tolerance
- Rapid recovery from summer stress
- Low fertility and moisture requirements, germinates rapidly
- Dense, tight-knit turf with fine leaf texture
- Great in blends

FESCUE

CELESTIAL (CRF)

Celestial Strong Creeping Red Fescue represents an advanced generation of synthetic fine fescue cultivars that expand the applications for this species. At home in the sun or partial shade, Celestial represents the best in low-maintenance turfs. Because of its fine leaf texture and darkest of green colours, it is highly recommended that Celestial be included in mixtures with perennial ryegrass and Kentucky bluegrass at a concentration of up to 40%.

- Performs very well in low fertility
- Low maintenance and low input requirements
- Summer and winter colour
- Resistant to many turf diseases, including leaf spot and red thread

SALTILLO (TALL)

Saltillo tall fescue is a dark green cultivar with excellent summer turf performance. With high heat, salt and drought tolerance, Saltillo also resists diseases such as brown patch, gray leaf spot, net blotch, stem rust and crown rust. Saltillo is adapted for lawns, golf course roughs, cemeteries, parks, sod production, sports fields, roadsides – and even slope stabilization.

- Very salt and drought tolerant (great summer turf performance)
- Disease resistant
- Performs well in sun or shade (great for low maintenance applications)

FESCUE

BIG HORN GT (HARD)

Big Horn GT is an American sheeps fescue with high turf performance, disease resistance, natural glyphosate resistance and increased seed yield. Big Horn GT displays a pleasing blue-green colour combined with good turf density and fine texture. These traits also contribute to an excellent range of mowing heights, from closely-mowed grass to natural areas. Big Horn GT can hold up as a mono-stand or perform well in blends and mixtures with other cool season grasses, especially other fine fescues. It can be used in lawn mixtures with perennial ryegrass and Kentucky bluegrass for improved shade performance.

- Vertical growth, good turf density and fine texture
- Glyphosate-, cold- and shade-tolerant
- Great for weed-free, unmowed areas
- Increased seed yield
- Excellent contrast with darker green turf species

NANOOK (HARD)

Nanook Hard Fescue is an extremely hardy turfgrass, exhibiting greater shade tolerance and disease resistance than other species of fescue. It is one of only five cultivars of hard fescues that are TWCA-qualified. It requires little maintenance on the mowing and fertilization front, making it ideal for situations – and growing environments – where upkeep is at a minimum.

- Low maintenance
- Low input needs
- Hardy turfgrass
- Shade- and disease-resistant
