# Forages

Summergraze is an intermediate timothy for high quality hay and pasture applications. It was selected for medium-to-late maturity, yield over the growing season, winter survival and ground cover. Summergraze has been evaluated across North America and is ideal for summer production in pasture and hay stands. It combines good spring vigor, a very leafy plant that blends well with both grasses and legumes. Timothy is well known for high palatability, persistence and tolerance to wet conditions.
