

SECURUS™
SEED ENHANCEMENT

BrettYoung™

Securus is a proprietary seed coating that combines uniform coverage and market-leading durability to enhance seed handling and agronomic performance.

Securus Alfalfa

Securus uses a naturally occurring talc carrier that is highly stable, chemically inert and odourless. Its plate-like structure delivers strong seed adhesion for improved flowability and less dust-off. Bacteria friendly and pH neutral, Securus supports high rhizobia levels and optimum on-seed survival, with options to precisely layer inoculants, fungicides and other growth-promoting additives.

SECURUS BENEFITS

- Helps with flowability and accurate seed placement
- Consistent seed appearance and improved visibility in the soil
- Helps create a seed environment that supports germination and seedling survival
- Available in a variety of colours
- Flexible treatment options, including inoculants, fungicides and growth-promoting additives, to support nitrogen fixation, seedling health and plant growth
